### Requirements

Accurize app uses Bluetooth Low Energy (BLE) to connect with Accurize targets. Your device must support BLE for the Accurize app to work. Your device should also have the latest operating software installed to ensure full compatibility.

- Most mid to high end Android™ devices support BLE running Android™ 8 and above.
- iPhone™ 6 onwards support BLE.
- iPad™ 3rd generation onwards support BLE.
- All iPad™ mini support BLE.

Android™ and Apple™ versions of the app function identically once installed.

### ***Target Connection Notes***

- The Accurize App will only connect to nearby Accurize targets.
- Accurize target must be in range of device with Accurize App installed to connect.
- Accurize target must be turned on with enough battery to connect.
- Only one Accurize target can be connected to at any time.
- Only one device can be connected to an Accurize Target.
- Try restarting Accurize App, Accurize target and device if issues connecting are experienced.
- Other devices using similar frequencies to Accurize targets may effect connection range.
- Most scopes are delivered today with fixed Parallax adjustment (normally adjusted to approximately 100m shooting distance). Such scopes will be challenging to work optimally with Accurize. The challenge is the distance to the target unit, and you will easily perceive the problem if you put the weapon on a table and aim at the target assembly. Moving the eye's position will cause the reticle to move on the target even though the weapon is quite calm. If you choose to use a regular scope, you should use the lowest possible magnification. You can use Accurize as a good exercise tool, but precision shooting on a small target- and short distance will be challenging / difficult. Your distributor, will sell a very affordable scope, which works well with the Accurize target.

Accurize works optimally if you use scopes with manual paralysis adjustment, red-eye view, diopter or open sight.

## Installation (Apple™)

1. Select App Store. Search for 'accurize' and select 'accurize' from suggested searches.

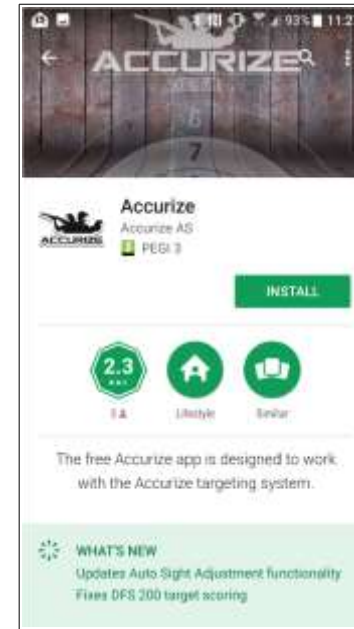

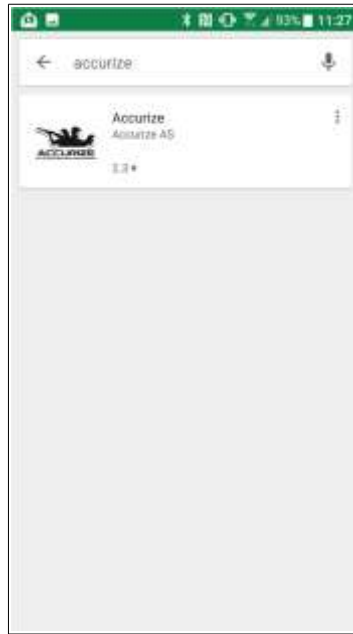

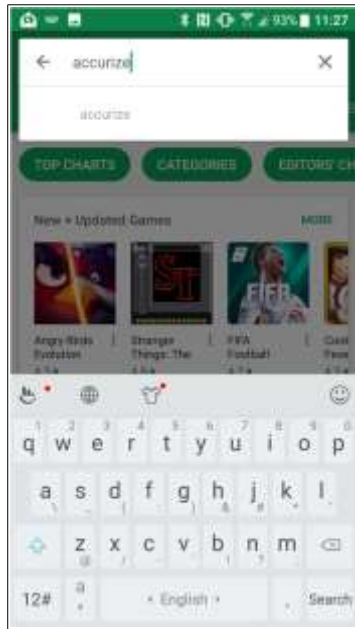

2. Touch 'GET' for Accurize app to install the app on your device.

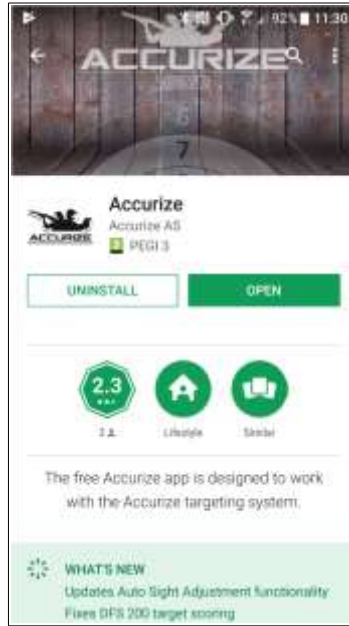

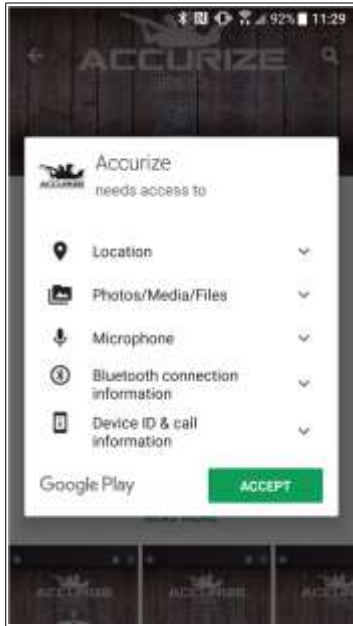

3. Once installed touch 'OPEN' to open the Accurize app

## Installation (Android™)

1. Select Google Play. Search for 'accurize'.

2. Touch Accurize app listing in search results.  
3. Touch 'INSTALL' to install Accurize app on your device.

4. Touch 'ACCEPT' to accept the Accurize App access requirements.

5. Touch 'OPEN' to open the Accurize app on your device.

### **Chosing Language**

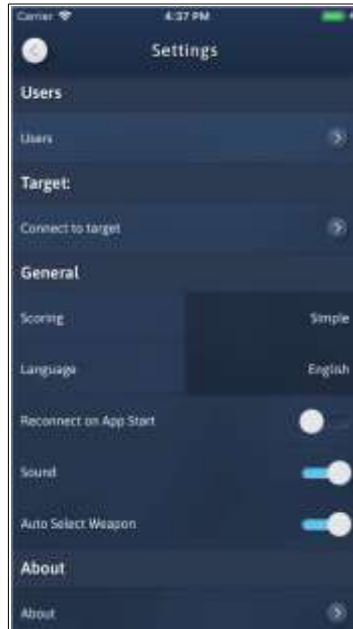

Language is detected automatically upon install using the device language settings. Once install the language can be changed at any time from the settings menu.

### ***Adding A User***

1 Touch the settings button to display the settings page.

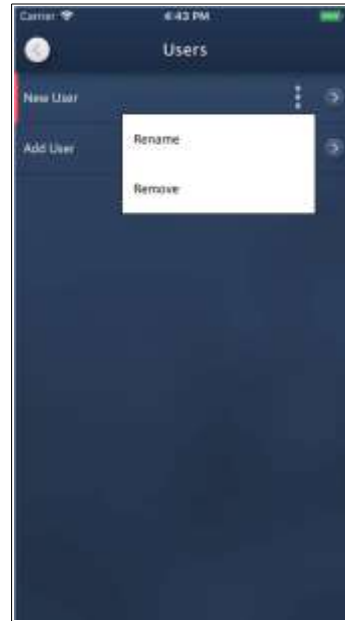

2 Enter users by touching users right arrow button.

Scroll down to view individual shot results.

Tap heatmap to toggle heatmap view on and off.

### Warning

Accurize targets are intended for indoor use only and will not work in direct sunlight. Accurize targets may also be sensitive to certain types of artificial lighting conditions that produce flickering light, including fluorescent tube lighting. If you continually receive an ambient light warning move the Accurize target to under different lighting conditions.

## Certifications

### FCC Declaration Of Conformance

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B Digital Device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of more of the following:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/tv technician for help.

**Caution:** Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
